

Reusable & Reliable Solutions

Battery Applications

- Jeco applications are durable, and hard to damage. They are rotationally molded, not injection molded or structural foam which is typically not as long lasting! Ideal for very heavy, bulky loads.
- Precise and accurate: Our pallets are very consistent for repetitive use in automated logistic systems. Conveyors to racking as well as with robotics, fork lift to pallet jack use. RFID tracking.
- **Fire Retardant** and ESD: Both our Roto-molded and/or Thermoformed applications, offer fire retardant and static dissipative materials and features.
- Jeco pallets do not absorb moisture or fluids. In fact, they are impervious to almost all known solvents. They are also easy to keep clean and can be simply sprayed off after repetitive use.
- Jeco's engineering group can work with you for the exact material and optimal design that meets your specific needs. Visit our web site form more info.
